

Portable Hoist

The portable hoist is a machine used to feed such machines as grinders, modlers, and so on by pouring the mix in the 200-liter trolleys containing ingredients for falafel, nuggets, and cutlets into the grinder or modler. This machine is primarily used in factories where manpower cannot be used due to the high volume of production capacity and the weight of trolleys.

Novin Sanat portable hoist is an all-steel device that, by utilizing powerful electric motors and large chains, increases productivity, efficiency, and saves labor costs, while also significantly lowering the risk of damage and accidents caused by manual operations.

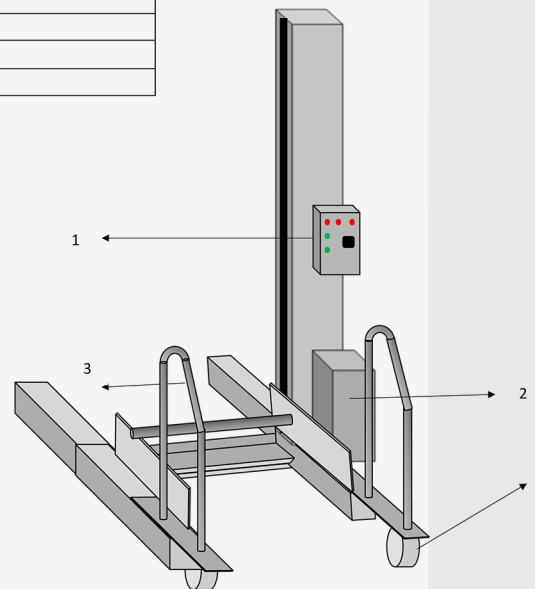

1	Control pannel
2	Motor
3	Carrying Handle
4	Wheel

Length: 155 cm

Width: 140 cm

Height: 270 cm

Main Motor: 2 HP, 3 PH
